Year 6 White Rose Maths (WRM) Autumn Scheme of Learning, 2017

Mathletics

Content

Examples of alignment to Mathletics

Weeks 1-2 Place Value	01
Weeks 3-6 Number: Four Rules	04
Weeks 7-10 Number: Fractions	13
Weeks 11 Geometry	21

Purpose:

The aim of this document is to support Mathletics teachers, who use the WRM scheme of learning, to make full use of the resources available within Mathletics. Whenever possible, activities, pages from the eBooks or learning experiences on Rainforest Maths have been matched to each of the small steps on the WRM scheme of learning.

In Mathletics, many eBooks are available in the student interface, however all eBooks are available to teachers through the teacher console. These topic-based eBooks contain practice and fluency exercises along with application questions and games. Only a small selection of the relevant pages has been added to the document.

Links to Rainforest Maths, which can be found in the 'Play' area in the Mathletics student interface, have also been included, as this resource has great visuals which work well on interactive whiteboards and give pupils further opportunities to practise their learning online.

Course selection:

A specific Mathletics course has been created in alignment with the WRM scheme of learning. You may wish to set this course for your class/groups.

Examples of alignment to Mathletics

Weeks 1-2 Place Value

National Curriculum Objectives	WRM Small Steps
<ul style="list-style-type: none"> ▶ Read, write, order and compare numbers up to 10,000,000 and determine the value of each digit. ▶ Round any whole number to a required degree of accuracy. ▶ Use negative numbers in context, and calculate intervals across zero. ▶ Solve number and practical problems that involve all of the above. 	<ul style="list-style-type: none"> ▶ Numbers to ten million ▶ Compare and order any number ▶ Round any numbers ▶ Negative numbers

Small step: Numbers to ten million

Write the number using digits.

nine million nine hundred and eighty-four thousand six hundred and ninety-two

9984692 ✓

Topic: **Number and Place Value**

Activity: *Numbers from Words to Digits 2*

Pupils read numbers in words and rewrite them in digits – up to 10 million.

State the digit in the tens place.

6,518,905

Millions
Hundred thousands
Ten thousands
Thousands
Hundreds
Tens
Ones

Start at the ones place and label the place values.

Topic: **Number and Place Value**

Activity: *Place Value – Millions*

Identify the digit in a given place – up to millions.

Read and understand numbers – place value to millions

The place of a digit in a number tells us its value.

6,216,085

6 is worth 6,000,000 or 6 millions
2 is worth 200,000 or 2 hundred thousands
1 is worth 10,000 or 1 ten thousand
6 is worth 6,000 or 6 thousands
0 is worth 0 or 0 hundreds
8 is worth 80 or 8 tens
5 is worth 5 or 5 ones

1 Fill in the place value chart for each number. The first one has been done for you.

	Millions	Hundred thousands	Ten thousands	Thousands	Hundreds	Tens	Ones
816,958		8	1	6	9	5	8
1,254,958							

eBook, G series: **Number and Place Value**, page 1+

Explanation of place value to millions.

Range of activities to practise key concepts.

Reading large numbers. score 0

Millions			Thousands			Ones		
H	T	O	H	T	O	H	T	O
	2	6	8	5	3			
	7	3	4	9	1	2		
9	7	5	6	4	2	3	5	1

Inside each large group we need the numbers as hundreds, tens and ones.
EXAMPLES:
Twenty six thousand, eight hundred and fifty-three.
Seven hundred and thirty-four thousand, nine hundred and twelve.
Nine hundred and seventy-five million, six hundred and forty-two thousand, three hundred and fifty-one.

How many millions, thousands and ones are shown on the abacus?

write, compare, order, check, next

Rainforest Maths — Level G — Reading Large Numbers
Illustrates place value beyond 10 million.

Small step: Compare and order any number

Select: <, = or >.

4,570,090,405 4,570,090,465

Topic: **Number and Place Value**

Activity: **Comparing Numbers**

Pupils compare large numbers using symbols.

Read and understand numbers – order large numbers

When ordering numbers it is important to look closely at the place of the digits.

Put the following numbers in order from smallest to largest:

1,248,604 smallest
550,654
1,547,521
1,485,504

eBook, G series: **Number and Place Value, page 4+**

Range of activities, including games to practise ordering numbers up to 7 digits.

Ordering large numbers. score 0

549 452 462 257 969 519 747 414 378

1. Read the numbers.
2. Write the numbers in order from smallest to largest.

EXAMPLE: 321 945 876 | 876 945 321 | 945 321 876

write, compare, order, check, next

Rainforest Maths — Level G — Ordering Large Numbers

Exercises to order numbers beyond a million.

Small step: Round any numbers

Round 55,765 to the nearest thousand.

55,765

Number

56000

Nearest thousand

Topic: **Number and Place Value**

Activity: **Rounding Numbers**

Round numbers to the nearest 1,000.

Other Activities:

Nearest Whole Number – rounding decimals.

Nearest 1,000? – rounding to nearest 1,000.

Round and estimate – round to a power of ten

Rounding makes big numbers easier to work with. We round to numbers that we can deal with easily in our heads. We most commonly round to the nearest 10 or power of 10.

770 rounds to 800
210 rounds to 200
350 rounds to 300

Round up when it is halfway between the 10 or more.
Round down when the number is less than halfway.

REMEMBER

1 Round to the nearest thousand:

a 12,388 _____ b 9,525 _____
c 39,610 _____ d 55,229 _____

eBook, G series: [Number and Place Value](#), page 16

Explains the rationale behind rounding numbers and how rounding can be used to support estimation.

Activities to practise rounding and estimation. Word problems also explore rounding and estimation.

Rounding to the nearest 10. score 0

50039980
50039979
50039978
50039977
50039976
50039975
50039974
50039973
50039972
50039971
50039970

Drag the green label to round the number UP or DOWN.

Look at the last two digits in the number.

10 100 1000 Practice

Rainforest Maths – Level G – Rounding

Exercises to practise rounding to the nearest 10, 100 and 1,000.

Small step: Negative numbers

Types of numbers – negative numbers

Negative numbers are numbers with a value less than zero. Negative numbers always have a minus sign before them.

Negative numbers are used when we measure temperature and in transactions with money. When we are in debt, we have a negative balance. This means we owe money.

1 What is the temperature showing on each thermometer in °C (degrees Celsius)?

a b c d e f

eBook, G series: [Numbers and Place Value](#), page 8+

Explains negative numbers and shows them in the context of temperature.

Activities to practise working with negative numbers.

-48 < 52

< less than = equal to > greater than

Topic: [Number and Place Value](#)

Activity: [Comparing Integers \(<, =, >\)](#)

Pupils compare integers and select the correct symbol. The support uses the number line to illustrate the number differences.

Positive and negative numbers.

negative: Negative numbers are numbers less than zero. They are written with a - sign. less than zero

0: Zero is neither positive or negative.

positive: Positive numbers are numbers greater than zero. They are sometimes written with a + sign. more than zero

Make positive and negative number patterns.

choose + show

Rainforest Maths – Level G – Positive and Negative Numbers

Illustrates positive and negative numbers on a number line. Pupils enter a number to create a number pattern that includes negative numbers (e.g. counting from -25 in steps of 5 to 25).

Examples of alignment to Mathletics

Weeks 3–6 Number: Four Rules

National Curriculum Objectives	WRM Small Steps
<ul style="list-style-type: none">▶ Solve addition and subtraction multi step problems in contexts, deciding which operations and methods to use and why.▶ Multiply multi-digit number up to 4 digits by a 2-digit number using the formal written method of long multiplication.▶ Divide numbers up to 4 digits by a 2-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding as appropriate for the context.▶ Divide numbers up to 4 digits by a 2-digit number using the formal written method of short division, interpreting remainders according to the context.▶ Perform mental calculations, including with mixed operations and large numbers.▶ Identify common factors, common multiples and prime numbers.▶ Use their knowledge of the order of operations to carry out calculations involving the four operations.▶ Solve problems involving addition, subtraction, multiplication and division.▶ Use estimation to check answers to calculations and determine in the context of a problem, an appropriate degree of accuracy.	<ul style="list-style-type: none">▶ Add and subtract whole numbers▶ Multiply up to a 4-digit by 1-digit number▶ Short division▶ Division using factors▶ Long division (1)▶ Long division (2)▶ Long division (3)▶ Long division (4)▶ Common factors▶ Common multiples▶ Primes▶ Squares and cubes▶ Order of operations▶ Mental calculations and estimation▶ Reasoning from known facts

When assigning calculation activities that do not have spaces for recording any regroupings, consider getting pupils to record the calculation in their maths books, then answer the question on Mathletics. Pupils can then self-mark their work after each question, receiving instant feedback to support their learning. If they realise they have made a mistake, they can do the correction in their book immediately. In Mathletics, pupils will be shown the correct answer. If they cannot see where they have gone wrong in their calculations they can access the support button in the activity and it will take them through the exact question they have just answered incorrectly.

Encourage students to use the strategies they are being taught in class and to use manipulatives if needed.

With most activities, including these calculation activities, questions are generated from a pool of questions, allowing students to complete the activities more than once without getting the same set of questions.

Small step: Add and subtract whole numbers

$$\begin{array}{r} 8765 \\ + 5957 \\ \hline 14722 \end{array}$$

Topic: Four Operations (Part 1)
Activity: *Add Multi-Digit Numbers 2 (UK)*
Pupils practise adding 4-digit numbers.

Rainforest Maths – Level G – Addition to 99 999
Provides practice exercises for students working up to 99,999 – with regrouping.

thousands	hundreds	tens	ones
6	9	4	8
-	7	5	9
<hr/>			

Topic: Four Operations (Part 1)
Activity: *Subtracting Colossal Columns (UK)*
Pupils use the formal written method to practise subtraction, with regroupings.

Rainforest Maths – Level G – Subtraction to 99 999
Pupils practise subtraction, working with numbers up to 6 digits. Models how to regroup.

Written methods – adding and subtracting

- 1 Use addition, subtraction or a combination of both to solve these word problems.
 - a At the 2006 Census, England's population consisted of 27,606,760 males and 23,156,140 females. What was the total population? How many more males than females were there?

eBook, G series: Addition and Subtraction

This eBook works through exercises for pupils to practise addition and subtraction. It includes a range of word problems, 2-step problems and problems where pupils have to decide which operation is needed.

Small step: Multiply up to a 4-digit by 1-digit number

$$\begin{array}{r} 1692 \\ \times \quad 7 \\ \hline 11844 \end{array}$$

Topic: **Four Operations (Part 2)**

Activity: **Contracted Multiplication**

In this adaptive activity, pupils begin by first multiplying 2-digit numbers by 1-digit numbers and then they move to multiplying 3-digit and 4-digit numbers by 1-digit numbers.

Written methods – long multiplication

	H	T	O
	1	5	6
x			3
	4	6	8
	1		

Contracted multiplication is one way of solving multiplication problems.
We estimate first: $150 \times 3 = 450$. The answer will be around 450.
We start in the ones column. 3×6 is 18 ones.
We rename this as 1 ten and 8 ones. We put the 8 in the ones column and carry the ten to the tens column.
 3×5 tens is 15 plus the carried ten is 16 tens.
We rename this as 1 hundred and 6 tens. We put the 6 in the tens column and carry the hundred.
 3×1 hundred is 3 hundreds plus the carried one is 4 hundred.

eBook, G series: **Multiplication and Division, page 16**

Explains contracted multiplication and moves on to long multiplication.

Gives examples for students to work through – multiplying by 1 digit and then 2 digits.

Multiplication ... extended. score 0

EXAMPLE:

$$\begin{array}{r} 435 \\ \times 34 \\ \hline 1740 \\ 13050 \\ \hline 14790 \end{array}$$
 multiply by the ones
 multiply by the tens
 add them together

The numbers resulting from regrouping are shown here to help. Remember to add them to your totals.

multiply BY the ones
 multiply BY the tens
 add them together

check next TRY practice 2

Rainforest Maths – Level G – Multiplication

Provides exercises to practise long multiplication with 1-digit numbers and then progresses to multiplying by 2-digit numbers.

Fill in the missing numbers.

$$\begin{array}{r} \quad 43 \\ \times \quad 23 \\ \hline \square \square \square \\ 860 \\ \hline 989 \end{array}$$

Topic: **Four Operations (Part 2)**

Activity: **Long Multiplication**

Pupils use the long multiplication method to multiply two 2-digit numbers.

Small step: Short division

$$\begin{array}{r} 0536 \text{ r } 1 \\ 3 \overline{) 1609} \end{array}$$

Topic: **Four Operations (Part 2)**

Activity: **Short Division**

This activity begins with division of 3-digit numbers by 1 digit, with no remainders. It then progresses to 4-digit numbers divided by 1 digit with remainders.

Written methods – short division

Short division can also be used when you are dividing by a 2-digit number. Look at this example.
15 does not divide into the largest place value of 4, so we look at the next place value as well.
15 does go into 48, as $3 \times 15 = 45$.
Write the 3 above the line and carry the remaining 3 next to the 0, making 30.
15 goes into 30 twice, as $2 \times 15 = 30$. Write the 2 above the line.
You now have your answer: $480 \div 15 = 32$

$$\begin{array}{r} 32 \\ 15 \overline{) 480} \\ \underline{45} \\ 30 \\ \underline{30} \\ 0 \end{array}$$

Solve these problems using short division:

a $3 \overline{) 84}$ b $22 \overline{) 88}$ c $33 \overline{) 66}$

eBook, G series: [Multiplication and Division – Short Division](#), page 20

Works through an example with an explanation.
Sets out exercises to practise short division.

Division ... no remainders.
4)168 means 168 divided by 4.
EXAMPLE: $4 \overline{) 42}$
4)168
score 0
choose
check
next
Enter the answer, click check.

Rainforest Maths – Level F – Division

Progresses through short division with and without remainders.

Rainforest Maths – Level G – Division

Provides further exercises working with larger numbers and increased difficulty.

Small step: Division using factors

$87 \div 9 =$ remainder ✓

Topic: [Four Operations \(Part 2\)](#)

Activity: [Remainders by Tables](#)

Pupils use their knowledge of times-tables and factors to answer these questions.

Mental division strategies – using factors

When we are dividing by 2 digit numbers we can split the divisor into two factors. This makes the problem easier. Then we do the division in two steps:

$216 \div 18$ 9 and 2 are factors of 18.
 $216 \div 2 = 108$ We divide 216 by 2.
 $108 \div 9 = 12$ We then divide 108 by 9.
 $216 \div 18 = 12$

For each problem, find a pair of factors you can work with and solve these problems:

a $564 \div 12$ b $126 \div 14$

eBook, G series: [Multiplication and Division](#), page 10-11

Explains how to use knowledge of factors to support division.
Also provides a useful recap of the divisibility rules on page 11.

Use known facts to do more sums in your head.

$255 \div 5 = 51$
 $200 \div 5 = 40$ $55 \div 5 = 11$
 $40 + 11 = 51$

Divide each part by 5 and then add.

Topic: [Four Operations \(Part 2\)](#)

Activity: [Mental Methods Division 2](#)

This activity includes the strategy of division using known factors.

Small steps:

- Long division (1)
- Long division (2)
- Long division (3)
- Long division (4)

Divide: 1-Digit Divisor 1

Topic: **Four Operations (Part 2)**

Activity: *Divide: 1-Digit Divisor 1*

Divide a 2-digit number by a 1-digit divisor using long division; no remainders.

Divide: 1-Digit Divisor 2

Topic: **Four Operations (Part 2)**

Activity: *Divide: 1-Digit Divisor 2*

Divide a 3-digit number by a 1-digit divisor using long division; no remainders.

Fill in the missing numbers:

$$\begin{array}{r}
 74 \text{ r } 0 \\
 6 \overline{) 444} \\
 \underline{6} \\
 2 \\
 \underline{2} \\
 4 \\
 \underline{4} \\
 0
 \end{array}$$

Topic: **Four Operations (Part 2)**

Activity: *Long Division by Whole Number*

Divide a 3-digit number by a 1-digit divisor using long division; includes remainders.

Long Division

Topic: **Four Operations (Part 2)**

Activity: *Long Division*

Divide a 3-digit number by a 2-digit divisor using long division; includes remainders.

Small step: Common factors

Find the GCF of the given numbers.

Factors of 30 = 1, 2, 3, 5, 6, 10, 15, 30

Factors of 50 = 1, 2, 5, 10, 25, 50

GCF = 10

Topic: **Four Operations (Part 1)**

Activity: *Greatest Common Factor*

The conceptual video shows pupils how to work out the greatest common factor of 2 numbers.

Activity: Provides activities to practise this concept.

Multiplication facts – factors, multiples and primes

A factor is a number that divides exactly into another number. For example, 4 divides into 12 3 times, so 4 and 3 are factors of 12.
When you multiply two factors you get a multiple. Thus, 12 is a multiple of 3 and 4.
If a number only has two factors (itself and 1), then we call it a prime number. For instance, the prime numbers under 10 are 2 (the only even prime), 3, 5 and 7.

Write the factors of the following number:

a 15

b 30

eBook, G series: Multiplication and Division, page 1

Explains concepts – factors, multiples and prime/composite numbers.

Provides exercises to apply learning.

Small step: Common multiples

Find the lowest common multiple of 6 and 9.

Multiples of 6 6, 12, 18, 24, 30, 36, 42, 48...

Multiples of 9 9, 18, 27, 36, 45, 54, 63, 72...

∴ LCM = 18

Topic: Four Operations (Part 1)

Activity: *Lowest Common Multiple*

Support shows pupils how to list the multiples to help find the lowest common multiple.

The activity works through finding the common multiple of 2 numbers and then moves to finding the lowest common multiple of 3 numbers.

Small step: Primes

Is 17 prime or composite?

Topic: Four Operations (Part 1)

Activity: *Prime or Composite?*

The video that accompanies this activity explains the concept of prime and composite numbers.

Pupils practise identifying if a number (up to 3 digit) is prime or composite in the activity.

Rainforest Maths – Level G – Prime and Composite Numbers

Explains the concepts of prime and composite numbers, along with factors, and includes a useful recap on divisibility rules.

Exercises provided to practise the concepts.

Small step: Squares and cubes

Rainforest Maths – Level G – Number – Square and Cubed Numbers

Explains the concepts of square and cubed numbers.

Exercises to practise finding square and cubed numbers.

Year 6 White Rose Maths (WRM) Autumn Scheme of Learning, 2017

Mathletics

Multiplication facts – square numbers

A square number is a number multiplied by itself.

$$1 \times 1 = 1 \quad 2 \times 2 = 4 \quad 3 \times 3 = 9$$

$$1^2 = 1 \quad 2^2 = 4 \quad 3^2 = 9$$

1 Show these square numbers on the grid and write what they are equal to:

a $4^2 =$ b $6^2 =$ c $5^2 =$ d $3^2 =$ e $7^2 =$

eBook, F series: [Multiplication and Division, page 5](#)
Explains square numbers and provides exercises to practise the concept.

Multiplication facts – cube numbers

A cube number is a number multiplied by itself three times.

For example, the cube of 3 is $3 \times 3 \times 3$, which equals 27. We can write '3 cubed' as 3^3 .

1 Write these cubed numbers out as full multiplications and find the answers:

a $3^3 =$ \times \times =

eBook, F series: [Multiplication and Division, page 6](#)
Explains the concept of cube numbers with follow up exercises.

Small step: Order of operations

Topic: [Four Operations \(Part 2\)](#)
Activity: [Order of Operations 1 \(BIDMAS\)](#)
The video that accompanies this activity clearly explains the rules for order of operations.

$15 + 54 \div 6 =$ ✓

Operation order	
B	BRACKETS
I	INDICES
DM	DIVISION or MULTIPLICATION
AS	ADDITION or SUBTRACTION

Topic: [Four Operations \(Part 2\)](#)
Activity: [Order of Operations 1 \(BIDMAS\)](#)
The activity provides exercises in applying the order of operations rules.

[Rainforest Maths – Level F– Equations: Order of Operations](#)
Shows the order the operations should be completed in and provides exercises to work through.

[Rainforest Maths – Level G – Equations: Order of Operations](#)
Provides further examples to work through.

Small step: Mental calculations and estimation

$1727 - 454 \approx$

1000 1700
1600 1200 ✓

Topic: **Four Operations (Part 1)**

Activity: *Estimation: Add and Subtract*

Pupils use rounding to estimate the answer to addition and subtraction calculations.

$9 \times 67 \approx$

330 730
630 ✓ 930

Topic: **Four Operations (Part 1)**

Activity: *Estimation: Multiply and Divide*

Pupils use rounding to support estimation in multiplication and division problems.

Other estimation activities included:

Activity: *Estimate Products*

Activity: *Estimate Quotients*

Small step: Reasoning from known facts

Strategies ... using place value.
A way to multiply larger numbers, by using place value.
1. Split the larger number into tens and ones. EXAMPLE: $65 \times 6 = 360 + 30 = 390$
2. Multiply the tens, then the ones.
3. Add the products together.
Splitting may be called partitioning.
 $98 \times 9 = 810 + 72$
= check next more
Enter the answer in the box.

Rainforest Maths — Level F: Multiplication strategies — split

Use known facts and place value knowledge to solve multiplication problems using mental strategies.

Strategies ... extensions.
A way to extend known number facts to larger numbers.
 $72 \div 8 = 9$
SO $720 \div 8 =$
SO $7200 \div 8 =$
multiplication × division ÷ next
Enter numbers in the boxes.

Rainforest Maths — Level F: Multiplication strategies — extensions

Use known facts and place value knowledge to solve division problems using mental strategies.

Use known facts to do more sums in your head.
 $255 + 5 = 51$
 $200 + 5 = 40$ $55 + 5 = 11$
 $40 + 11 = 51$
Divide each part by 5 and then add.

Topic: **Four Operations (Part 2)**

Activity: *Mental Methods Division 2*

Pupils use known facts to solve division problems using mental strategies.

Year 6 White Rose Maths (WRM) Autumn Scheme of Learning, 2017

Mathletics

I am Thinking of a Number!

What is the number?

When I add 8 to it,
the result is 4 less than 18.

right hand side

$$7 + 8 = 18 - 4$$
$$7 + 8 = 14$$
$$6 + 8 = 14$$

The number is 6

Back

Hint: What do I need to add to 8 to get 14?

Calculate the missing number.

Topic: **Problem Solving – Something Easier**

Activity: *I am Thinking of a Number!*

Although the numbers in this activity are easy, this activity does provide extra practise with reasoning to find answers using known facts.

Examples of alignment to Mathletics
Weeks 7-10 Number: Fractions

National Curriculum Objectives	WRM Small Steps
<ul style="list-style-type: none"> ▶ Use common factors to simplify fractions; use common multiples to express fractions in the same denomination. ▶ Compare and order fractions, including fractions > 1. ▶ Add and subtract fractions with different denominations and mixed numbers, using the concept of equivalent fractions. ▶ Multiply simple pairs of proper fractions, writing the answer in its simplest form [for example $\frac{1}{4} \times \frac{1}{2} = \frac{1}{8}$] ▶ Divide proper fractions by whole numbers [for example, $\frac{1}{3} \div 2 = \frac{1}{6}$] ▶ Associate a fraction with division and calculate decimal fraction equivalents [for example, 0.375] for a simple fraction [for example $\frac{3}{8}$] ▶ Recall and use equivalences between simple fractions, decimals and percentages, including in different contexts. ▶ Generate and describe linear number sequences (with fractions). 	<ul style="list-style-type: none"> ▶ Simplify fractions ▶ Fractions on a number line ▶ Compare and order fractions by the denominator ▶ Compare and order fractions by the numerator ▶ Add and subtract fractions (1) ▶ Add and subtract fractions (2) ▶ Adding fractions ▶ Subtracting fractions ▶ Mixed addition and subtraction problems ▶ Multiply fractions by whole number ▶ Multiply fractions by fraction ▶ Divide a fraction by a whole number (1) ▶ Divide a fraction by a whole number (2) ▶ Four rules with fractions ▶ Fraction of an amount ▶ Fraction of an amount - finding the whole

Small step: Simplify fractions

Topic: **Fractions**

Activity: *Simplifying Fractions*

The video that accompanies this activity provides an introduction to fractions, including equivalent fractions.

$$\frac{45}{144} = \frac{5}{16} \quad \checkmark$$

Topic: **Fractions**

Activity: *Simplifying Fractions*

This is an adaptive activity that moves from fractions that can be simplified to $\frac{1}{2}$, $\frac{1}{4}$ or $\frac{1}{3}$ to those with higher denominators.

Fractions ...

Reducing (or simplifying) a fraction to its lowest form means reducing the numerator and the denominator to the smallest numbers possible.

We reduce fractions to their lowest form by:

- DIVIDING both the numerator and the denominator by their HIGHEST COMMON FACTOR

EXAMPLE:

$$\frac{5}{20} = \frac{1}{4}$$

Reduce (simplify) the fraction. Remember to DIVIDE the numerator AND the denominator.

$\frac{8}{80} =$

check next more

Rainforest Maths – Level G – Fractions

Reducing fractions – explains how to look for common factors when simplifying fractions.

Fractions – simplifying fractions

These fractions are all equivalent to one half: $\frac{1}{2}$ $\frac{2}{4}$ $\frac{6}{12}$ $\frac{75}{150}$ $\frac{3455}{6910}$

Which is the simplest? $\frac{1}{2}$

A fraction is in its simplest form when 1 is the only number that both numbers can be divided by. We simplify fractions to make reading and working with fractions easier.

1 Circle the simplest fraction in each group:

- a $\frac{1}{2}$ $\frac{2}{4}$ $\frac{50}{100}$ b $\frac{33}{99}$ $\frac{3}{9}$ $\frac{1}{3}$

eBook, G series: Fractions, Decimals and Percentages, page 4

Explains how to simplify fractions and provides exercises for practise.

Small step: Fractions on a number line

Which fraction is the arrow pointing at?

Topic: Fractions

Activity: *Identifying fractions beyond 1*

Pupils identify improper fractions on a number line.

Slide the dot to the point on the number line that is equivalent to the fraction shown below:

$$\frac{4}{5}$$

Topic: Fractions

Activity: *Equivalent Fractions on a Number Line 2.*

Using a number line from 0–1, pupils position fractions, using their understanding of equivalent fractions.

Small steps:

- Compare and order fractions by the denominator
- Compare and order fractions by the numerator

Rainforest Maths – Level F – Fractions: ordering

Models fractions on a number line to support the ordering of fractions with the same denominator.

Topic: Fractions

Activity: *Ordering Fractions 1*

Pupils order fractions from the smallest to the largest – requires understanding of both denominator and numerator.

Topic: Fractions

Activity: *Compare Fractions 2*

Pupils shade in the models to show the fractions and then sort the fractions into order. Visual supports understanding.

Use the number line to decide which fraction is larger.

Topic: Fractions

Activity: *Counting with Fractions on a Number Line*

This adaptive activity compares improper and mixed fractions using a number line for support. Same denominator.

Fractions – comparing and ordering fractions

Comparing and ordering fractions with like numerators and denominators is a simple process: When the denominators are different, we need to change the fractions so they have the same denominator. This lets us compare like with like.

Which is larger? $\frac{3}{4}$ or $\frac{5}{8}$

To convert quarters to eighths we double the denominator and numerator, so $\frac{3}{4}$ becomes $\frac{6}{8}$. $\frac{6}{8}$ is larger than $\frac{5}{8}$, so $\frac{3}{4}$ is larger than $\frac{5}{8}$.

1 Order these fractions:

- $1\frac{1}{2}$ $\frac{5}{4}$ $\frac{3}{4}$ $\frac{2}{4}$ $1\frac{3}{4}$ $\frac{1}{4}$ $\frac{4}{4}$

Mmm... I had better make the mixed numbers into improper fractions as well.

eBook, G series: Fractions, Decimals and Percentages, page 6

Explains ordering of fractions with like and unlike denominators.

Exercises practise the concepts.

Year 6 White Rose Maths (WRM) Autumn Scheme of Learning, 2017

Small steps:

- Add and subtract fractions (1)
- Add and subtract fractions (2)
- Adding fractions
- Subtracting fractions
- Mixed addition and subtraction problems

Calculating – adding and subtracting common fractions

How do we add or subtract fractions? Look at this example:
We had a movie marathon on the weekend. On Saturday, we watched movies for $7\frac{1}{2}$ hours and on Sunday we watched for $5\frac{1}{4}$ hours. How many hours did we spend watching movies in total?
 $7\frac{1}{2} + 5\frac{1}{4} =$
First we add the whole numbers: $7 + 5 = 12$. Then we add the fractions: $\frac{1}{2} + \frac{1}{4} = \frac{3}{4}$
Then we add the two answers together: $12 + \frac{3}{4} = 12\frac{3}{4}$
We use the same process to subtract fractions.

eBook, G series: Fractions, Decimals and Percentages, page 29

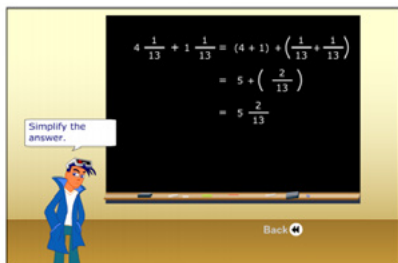

Explains adding and subtracting fractions with a common denominator.

Provides problems and exercises to work through.

Rainforest Maths – Level G – Fractions: Add, subtract

Add and subtract fractions where the denominators are the same and then move to subtraction of unlike but related denominators.

Topic: **Add & Subtract Fractions**

Activity: **Add Like Mixed Numbers**

Pupils add mixed numbers with the same denominator, then simplify.

Topic: **Add & Subtract Fractions**

Activity: **Subtract Like Mixed Numbers**

Pupils subtract mixed numbers with the same denominator, then simplify.

$$\frac{10}{16} + \frac{1}{4} = \frac{7}{8} \checkmark$$

Topic: **Add & Subtract Fractions**

Activity: **Add Unlike Fractions**

Activities provide addition of unlike but related denominators. Pupils need to find the least common denominator to add the fractions together, then reduce the fraction to its simplest form.

Related activity: **Add Unlike Mixed Numbers**

Add mixed numbers with unlike but related denominators. Find the least common denominator first.

$$\frac{7}{12} - \frac{1}{3} = \frac{1}{4} \checkmark$$

Topic: **Add & Subtract Fractions**

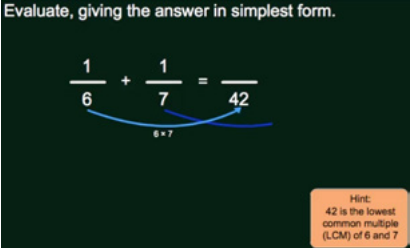

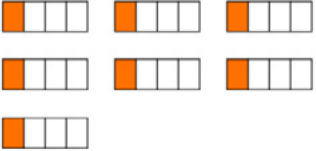

Activity: **Subtract Unlike Fractions**

Pupils need to find the least common denominator first then subtract the fractions and simplify their answers.

Related activity: **Subtract Unlike Mixed Numbers**

Subtract mixed numbers with unlike but related denominators. Find the least common denominator first.

<p>In a class, $\frac{1}{5}$ of the students have blue eyes and $\frac{1}{3}$ of the class has green eyes.</p> <p>If there are 15 students in the class, how many students had either blue or green eyes?</p> <p>Blue or Green = <input type="text" value="8"/> ✓</p>	<p>Topic: Problem Solving Activity: <i>More Fraction Problems</i></p> <p>This activity has a range of fraction word problems – finding answers involves addition and subtraction of fractions and simplifying answers.</p>

	<p>Rainforest Maths – Level G – Fractions – Multiplying (click MORE for the 'Multiply the fractions' game)</p> <p>Multiply two fractions. Simplification not required.</p>

Small step: Divide a fraction by a whole number

Topic: **Multiply & Divide Fractions**

Activity: *Divide Fractions Visual Model*

Pupils use the interactive model to work through the exercise – this shows the concept of dividing fractions by a whole number.

This is an adaptive activity and some answers require simplification.

Calculating – dividing fractions by whole numbers

To divide a fraction by a whole number, you multiply the denominator (the bottom part) by the whole number. So,

$$\frac{1}{2} \div 2 = \frac{1}{2 \times 2} = \frac{1}{4}$$

A half divided in two is a quarter: $\frac{1}{2} \div 2 = \frac{1}{4}$

Sometimes you might need to simplify the answer. For example,

$$\frac{2}{3} \div 2 = \frac{2}{3 \times 2} = \frac{2}{6} = \frac{1}{3}$$

eBook, G series: **Fractions, Decimals and Percentages, page 34**

Explains how to divide a fraction by a whole number and gives examples to practise the concept.

Small steps:

- Fraction of an amount
- Fraction of an amount – finding the whole

Find the lengths of each strip:

Strip B is $\frac{1}{2}$ of strip A

Strip C is $\frac{1}{3}$ of strip B

Strip A is cm

Strip B is cm

Strip C is cm

Topic: **Problem Solving**

Activity: *Fraction Length Models 2*

Pupils have to use fractional relationships to work out the different lengths.

The length of the strips can be altered by pupils to help them to visualise and use reasoning to think through their answers.

Fractions of an amount – finding fractions

What process do we use to find fractions of amounts?

When we find $\frac{1}{4}$ of 20, we are sharing 20 into 4 groups. We use division to find fractions.

1 Warm up with this puzzle. Use division to find the answer to each clue. The solved puzzle will tell you the name of a very important day of the year.

eBook, G series: **Fractions, Decimals and Percentages, page 20**

Explains how to find a fraction of an amount. Provides examples of problems to solve and exercises to practise the concept.

Find $\frac{4}{5}$ of 20.

20
Number

$\frac{4}{5}$ of the number

Topic: **Multiply & Divide Fractions**

Activity: *Fraction of an Amount*

Pupils use multiplication to find fractions of amounts.

Year 6 White Rose Maths (WRM) Autumn Scheme of Learning, 2017

Mathletics

Pete saves $\frac{4}{9}$ of his wages each week.
If he saves £180 per week, how much is his total wage?

Wage = £

Topic: **Multiply & Divide Fractions**

Activity: *Fraction Word Problems*

Solve word problems involving fractions of amounts.

Application of fractions in a rich task

THE GUMBALL HEIST

eBook, G series: **The Gumball Heist (rich task)**

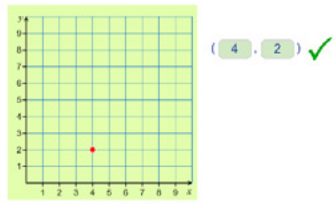

A video takes pupils through a story scenario involving a 'gumball heist'. Solving the problem involves applying their understanding of fractions and finding fractions of amounts. Pupils can also create similar scenarios to challenge each other.

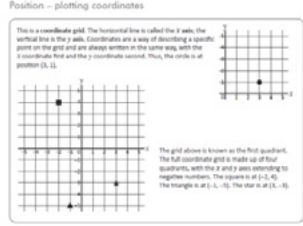

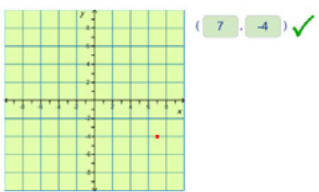

Examples of alignment to Mathletics
Weeks 11 Geometry

National Curriculum Objectives	WRM Small Steps
<ul style="list-style-type: none"> Describe positions on the full coordinate grid (all four quadrants). Draw and translate simple shapes on the coordinate plane, and reflect them in the axes. 	<ul style="list-style-type: none"> Coordinates in the first quadrant Plotting coordinates Translations Reflections Reasoning about shapes with coordinates

Small step: Coordinates in the first quadrant

<p>What are the co-ordinates of the point shown?</p> 	<p>Topic: Position Activity: <i>Coordinate Graphs: 1st Quadrant</i> Pupils record the coordinates for the marked point.</p>
	<p>Rainforest Maths — Level F and G — Position: Coordinates Provides maps with coordinates in the first quadrant. Pupils find the coordinates of different points on the map.</p>

Small step: Plotting coordinates

<p>Position - plotting coordinates</p> 	<p>eBook, G series: Geometry, page 40 Explains how to plot coordinates on a grid in the first quadrant and then extends to 4 quadrants. Includes exercises to practise plotting coordinates and reading them. Moves on to plotting coordinates in order to create shapes.</p>
<p>What are the co-ordinates of the point shown?</p> 	<p>Topic: Position Activity: <i>Coordinate Graphs</i> Students record the coordinate of a marked point on a 4-quadrant grid.</p>

Small step: Translations

What transformation is shown?

- Reflection
- Translation
- Rotation

Topic: **Position**

Activity: *Transformations*

Pupils identify if a shape has been reflected, transformed or rotated.

Position – translating and reflecting shapes

We can translate a shape by 'sliding' it to a new position without rotating it or flipping it. The triangle A has been translated to position B. Point $(-4, 1)$ has been translated to point $(1, 0)$.

We can also reflect a shape in an axis. Triangle A has also been reflected in the y axis to create triangle C.

eBook, G series: *Geometry*, page 43

Explains translations of shapes across a grid and how to work out the coordinates after a translation.

Exercises to practise translating and reflecting shapes on a 4-quadrant grid.

Write the coordinates of the new point after A is reflected over the x -axis.

$(-8, 6)$ ✓

Topic: **Position**

Activity: *Transformations: Coordinate Plane*

Pupils record the coordinate of a point on a shape after a transformation.

Identify the rotation of the red figure to the blue figure.

- 180°
- 90° clockwise ✓
- 90° counterclockwise

Topic: **Position**

Activity: *Rotations: Coordinate Plane*

Pupils identify the number of degrees a shape has been rotated to reach a new position on the grid.

Small step: Reflections

Transformation, tessellation and symmetry – line symmetry

Reflective or line symmetry describes mirror image, when one half of a shape or picture matches the other exactly. The middle line that divides the two halves is called the line of symmetry. Shapes may have:

no line of symmetry

one line of symmetry

more than one line of symmetry

eBook, G series: *Geometry*, page 19

Explains line symmetry and moves on to rotational symmetry and tessellations. Examples and exercises are provided for pupils to explore reflections.

See other related activities above, eg '*Transformations*.'

Small step: Reasoning about shapes with coordinates

What are the new coordinates of (7, -4) if it is shifted 8 units to the left and 5 units downwards?

(-1 , -9) ✓

Topic: **Position**

Activity: *Horizontal and Vertical Change*

Find the coordinates of a point after it has been translated – both horizontally and vertically. No grid is provided, so pupils will need to visualise the changes or record notes in their Maths books to help them reason and find the new coordinates.

Live Mathletics

What's in level 5?

<p>Addition from 1 - 500</p> <p>$20 + 40 + 35 = ?$</p> <input type="text"/> <input type="button" value="Check"/>	<p>Subtraction from 1 - 100</p> <p>$15 - 3 = ?$</p> <input type="text"/> <input type="button" value="Check"/>
<p>Addition from 1 to 100 with a missing addend</p> <p>$30 + ? = 100$</p> <input type="text"/> <input type="button" value="Check"/>	<p>All multiplication and division facts to 10×10</p> <p>$10 \times 7 = ?$</p> <input type="text"/> <input type="button" value="Check"/>
<p>Time conversions</p> <p>How many seconds in 8 minutes?</p> <input type="text"/> <input type="button" value="Check"/>	<p>Length conversions</p> <p>$7 \text{ mm} = 98\text{m}$</p> <input type="text"/> <input type="button" value="Check"/>

Live Mathletics engages pupils in one minute games where they are challenged to recall Maths facts.

To support progress in Year 6, pupils should use Level 5.

Teachers can set minimum levels in Live Mathletics by clicking the switch to old Mathletics button, selecting results, and selecting minimum levels on the left-hand side of the page. Students can still access higher levels once you set a minimum level, so encourage students to challenge themselves and move on to the next level when they are ready.

(Note: Live Mathletics levels are a sliding scale, with no relationship to classes or old National Curriculum levels.)
